DIAMS-1

Publication of the November 1969 Edition of the File and Program Catalog System (FPCS)

1. FFS system level problems delayed production of the printer's copy of the November 1969 edition of the FPCS volumes. These problems have now been solved and all four SECRET level volumes of the publication have been delivered to DIASA-2 for publication/dissemination.
2. DIASA-2 advises that we are dependent upon either the Defense Printing Service or the Government Printing Office for a publication job of this size (about 3,365 total pages of text). The DIASA-2 opinion is that, while both of these services are badly backlogged with work, the Defense Printing Service can better accommodate our production requirement (a large number of pages to relatively few recipients).
3. DIASA-2 has, therefore, forwarded the printer's copy to the Defense Printing Service and has obtained job completion dates ranging from 5 March for the File Catalog to 17 March for the Program Catalog Index. This schedule should put all volumes in the hands of the recipients within the month of March.
